```
git clone https://github.com/anistarsung/AppDevKitLearning.git
```

Agenda

- Leverage AppDevKit in few steps
- Build Some Apps with AppDevKit
- Using Swift with AppDevKit

Leverage AppDevKit

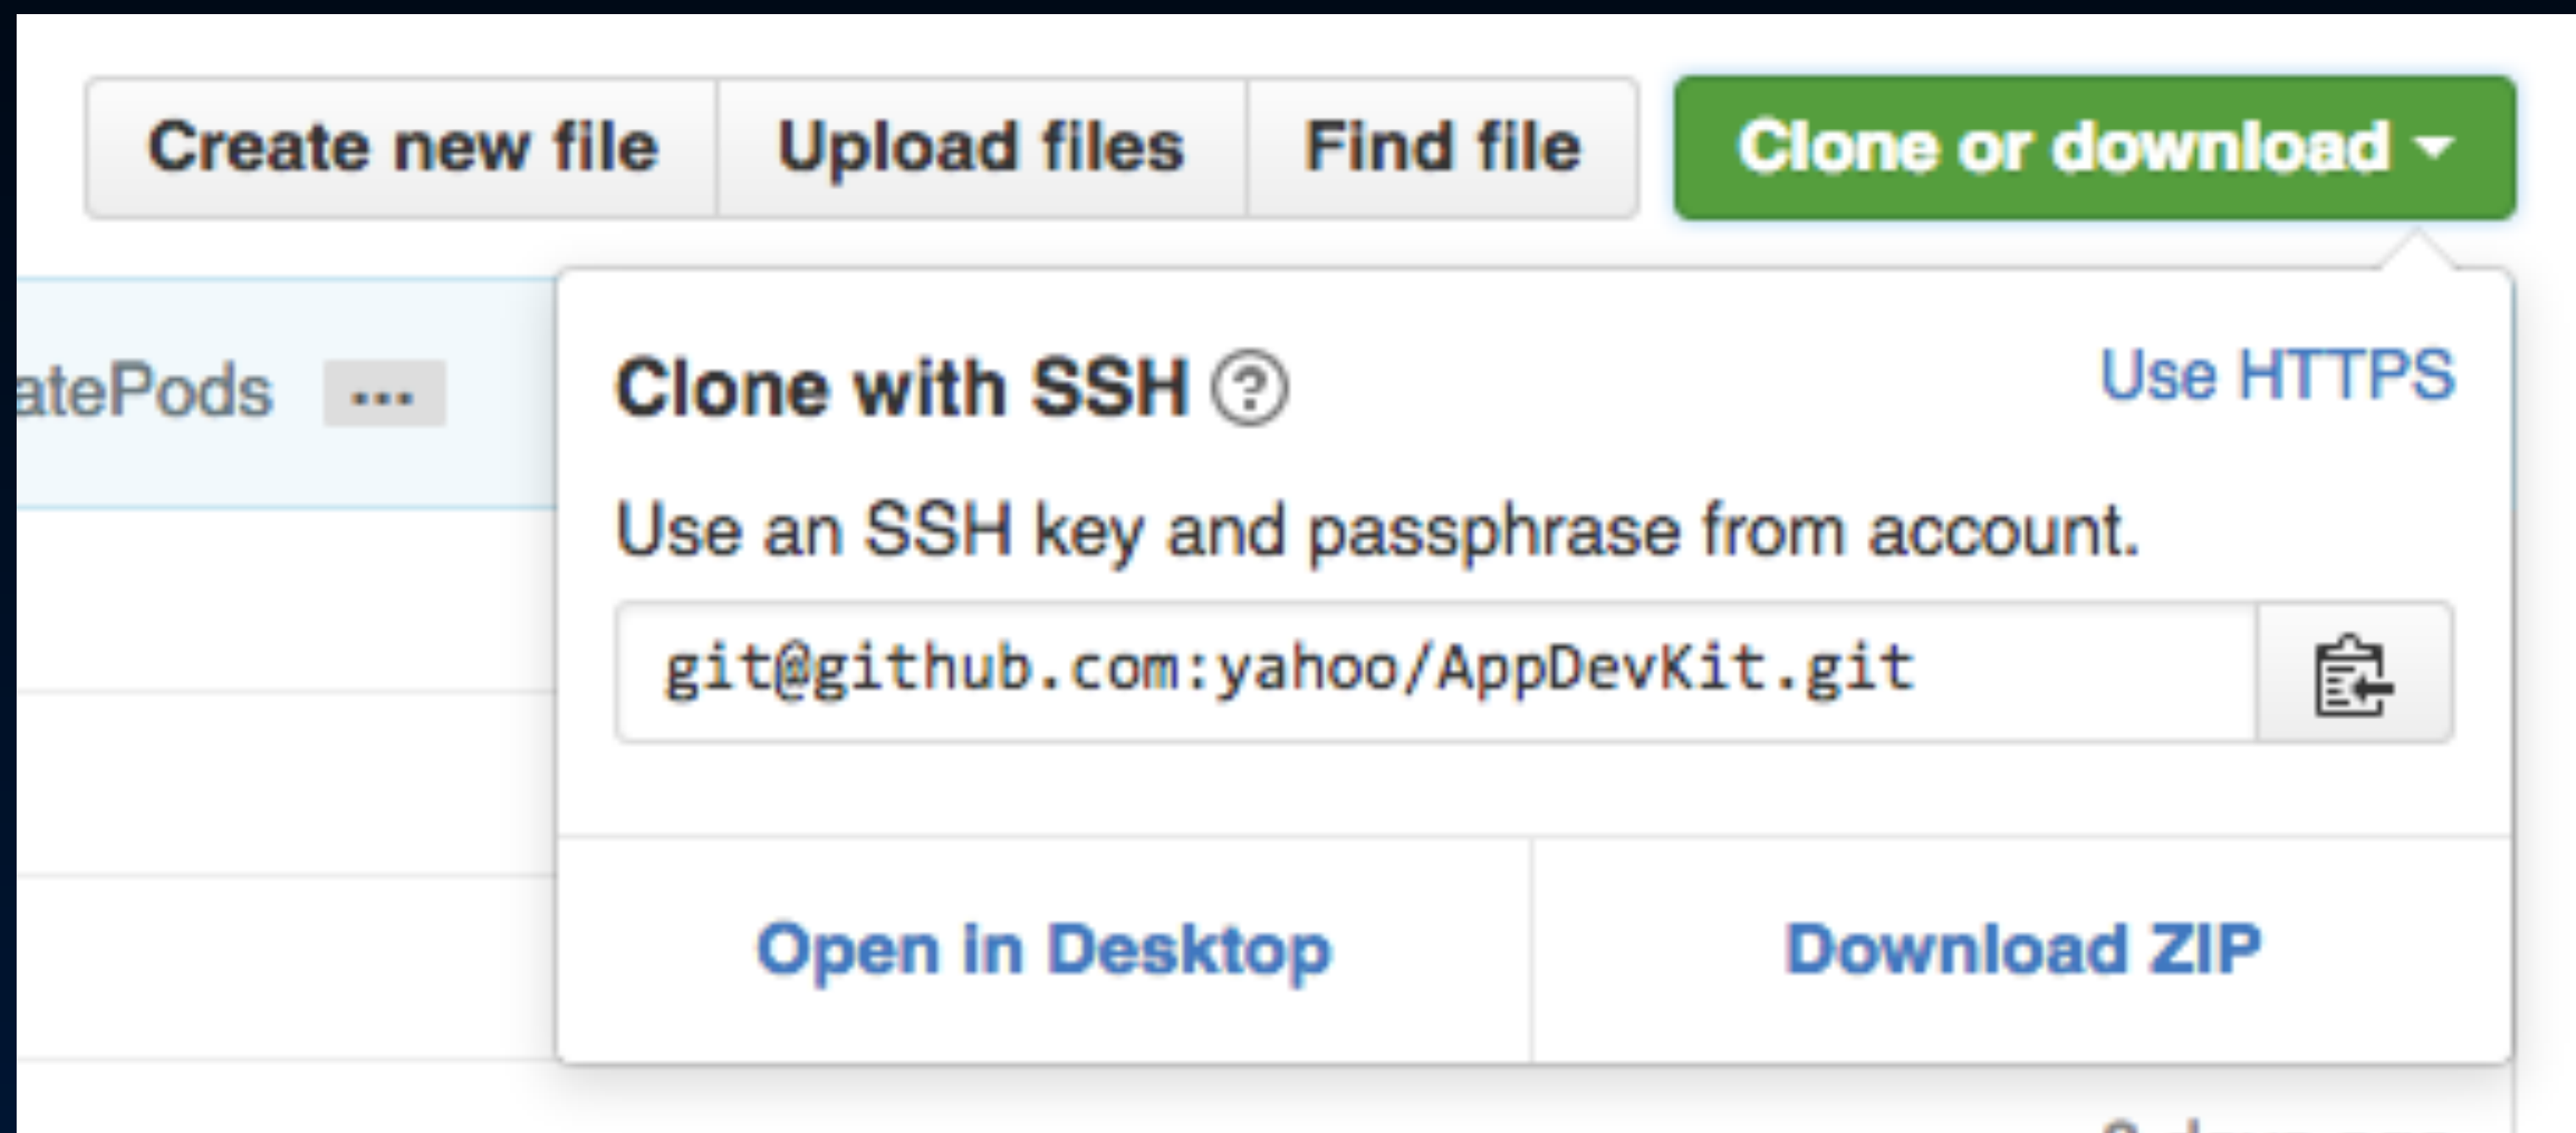

Build First App with AppDevKit

Source Code of AppDevKit

<https://github.com/yahoo/AppDevKit>

Get Source Code from Github

Set up AppDevKit

- Cloning code into your project directly
- Using CocoaPods to manage package

What's CocoaPods

 [yahoo/AppDevKit](#)

[README](#) [CHANGELOG](#)

AppDevKit is an iOS development library that provides developers with useful features to fulfill their everyday iOS app development needs.

Yahoo's Taiwan based iOS app development team has been using this development kit for the past three years, and we plan future apps to use AppDevKit as well. Our use of this code in many apps helped improve its stability and utility. We find these libraries help address some incompatibility issues found in different iOS versions, and overall make app development easier and our apps operate more consistently.

AppDevKit has five major parts that include command, user interfaces, animations, image view, and list view support libraries. Please feel welcome to use AppDevKit in your iOS projects as it is licensed under the permissive open source BSD license.

Using CocoaPods

Installing CocoaPods

```
$ sudo gem install cocoapods
```

Initializing CocoaPods

```
$ pod init  
$ nano Podfile
```

Using CocoaPods

Editing Podfile

```
platform :ios, '8.0'

target 'MyApp' do
  pod 'AppDevKit', '~> 1.0'
  pod 'AFNetworking', '~> 2.6'
end
```

Using CocoaPods

Installing Package by CocoaPods

```
$ pod install
```

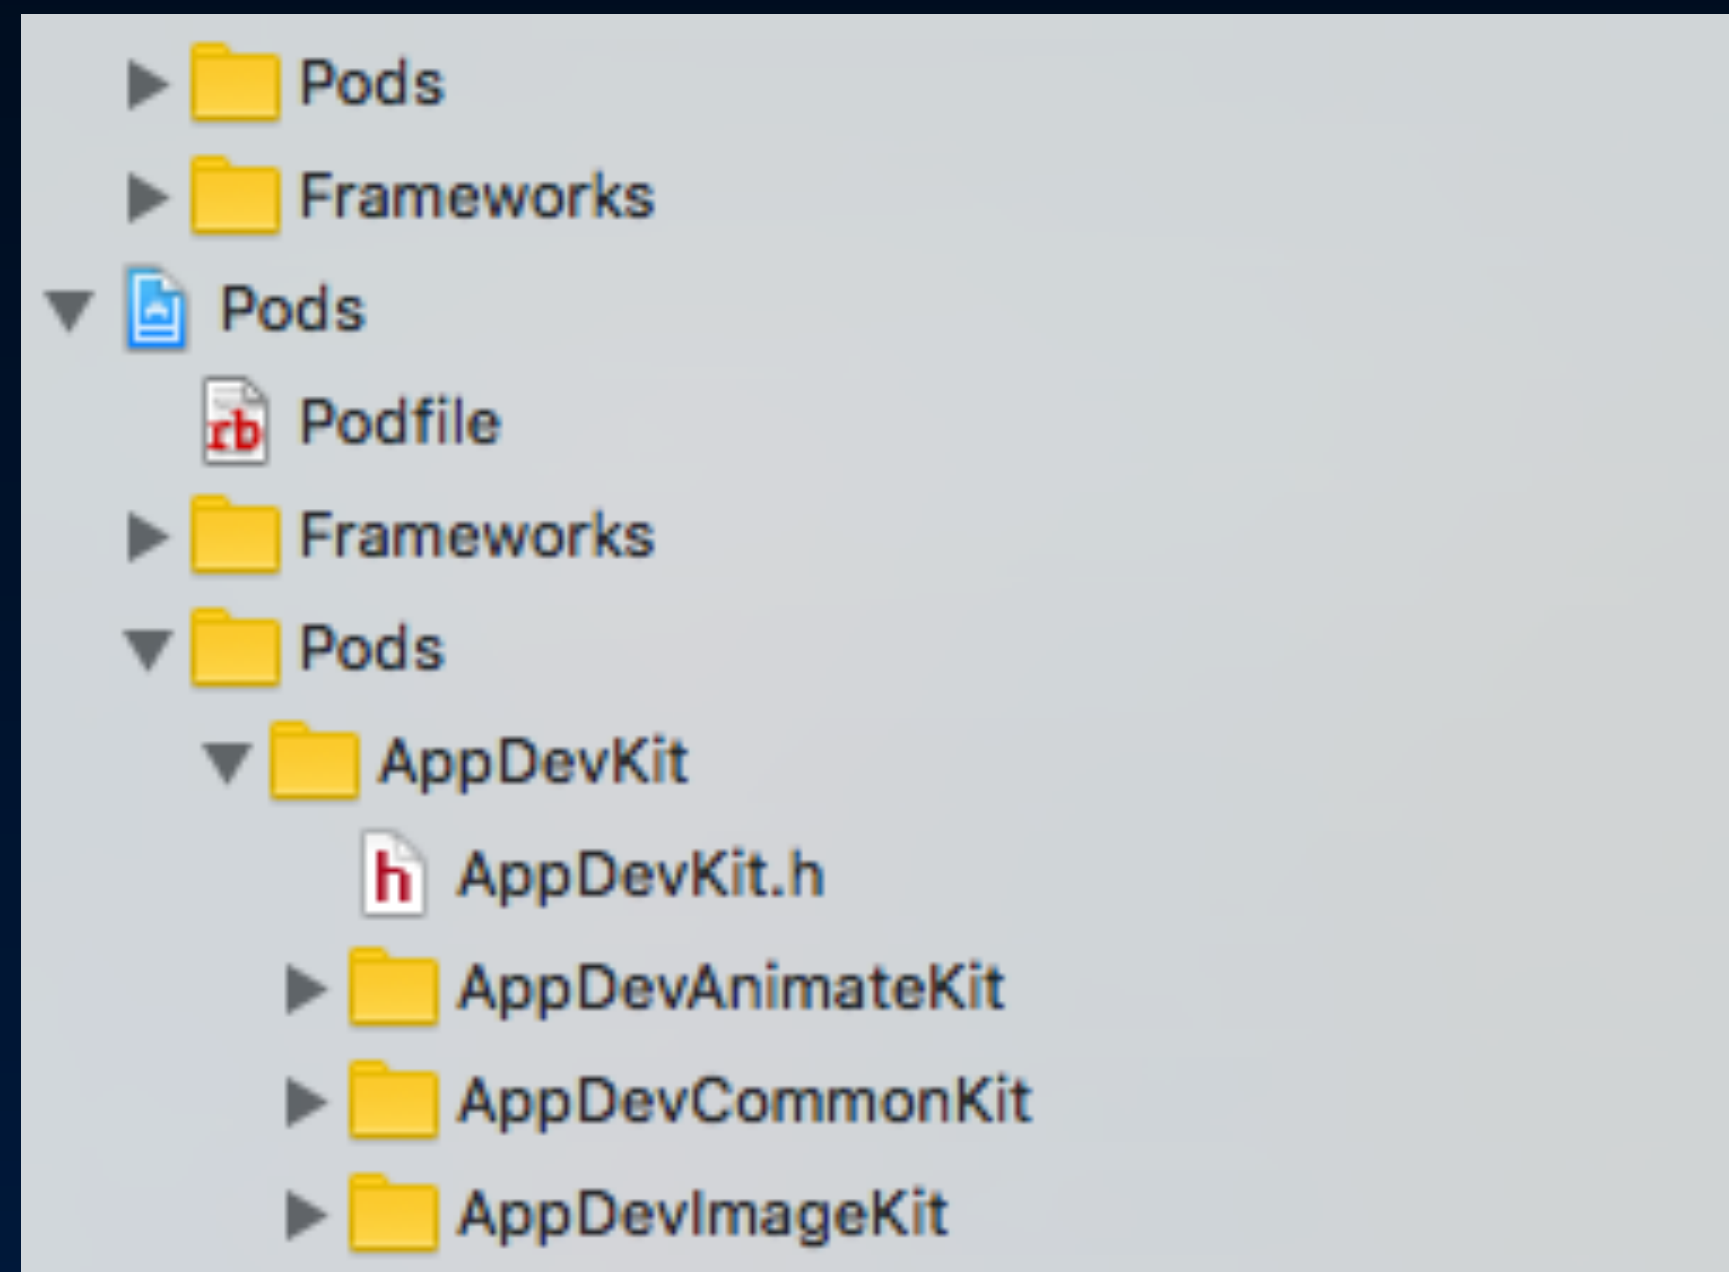

Updating Package by CocoaPods

```
$ pod update
```

Working with AppDevKit

Open iOS Project with Pods

```
$ open MyApp.xcworkspace
```

Working with AppDevKit

Importing Libraries from AppDevKit

```
#import <AppDevKit.h>
```

Demo

Start HelloWorld with AppDevKit

Using UIColor Hex presentation

Utilities made setting color easier

Hex Color Format from Designer

FBDA18

21B1E6

4C00A5

But UIColor....

```
+(UIColor *)colorWithWhite:(CGFloat)white alpha:(CGFloat)alpha;
```

```
+(UIColor *)colorWithHue:(CGFloat)hue saturation:  
(CGFloat)saturation brightness:(CGFloat)brightness alpha:  
(CGFloat)alpha;
```

```
+(UIColor *)colorWithRed:(CGFloat)red green:(CGFloat)green blue:  
(CGFloat)blue alpha:(CGFloat)alpha;
```

.....

No hex presentation... :(

AppDevKit Hex Color Utility

```
[UIColor ADKColorWithHexString:@"fbda18"]
```

```
[[UIColor ADKColorWithHexString:@"fbda18"]  
ADKColorShiftByBrightness:0.7f];
```

Demo

Using UIColor+ADKHexPresentation

Applying UIImage Filters

Changing image color in one line

Color Replacement

Color Replacement

- One image could fulfill all states change
- Reducing App size
- Providing other filters and color replacement methods

Color Replacement

```
[UIImage ADKImage:originalImage  
replaceColor:[UIColor redColor]];
```

Demo

Using UIImage+ADKImageFilter

Using Animation Marcos

Animation is a piece of cake

Animation Marcos

Animation Marcos

```
[button popUpAnimation];
```

Demo

Using UIView+ADKAnimationMacro

Using Modal Mask View

Making A Focused UX Flow

Modal Mask View

Modal Mask View

- Presenting custom modal view and dismiss automatically
- Below iOS 8, it don't support `UIModalPresentationOverCurrentContext`

Modal Mask View

```
[ [ADKModalMaskView alloc] initWithView:UIView  
modalColor:UIColor autoDismiss:YES];
```

```
[modalView showInView:UIView withAnimation:YES  
completion:^(BOOL finished){...}];
```

Demo

Using ADKModalMaskView

Drawing Gradient Background

Without Bitmap Image Solution

ADKGradientView

ADKGradientView

- Don't need bitmap image (Programmable solution)
- Reduce App size
- Support assigning color and orientation

ADKGradientView

```
view.beginColor = [UIColor redColor];  
view.endColor = [UIColor greenColor];  
view.blendsType = ADKBlendsTypeFromLeftTopToRightBottom;
```

ADKBlendsTypeFromTopToBottom
ADKBlendsTypeFromLeftToRight
ADKBlendsTypeFromLeftTopToRightBottom
ADKBlendsTypeFromRightTopToLeftBottom

Demo

Using ADKGradientView

Using AutoLayout Utility

Controlling AutoLayout easier

AutoLayout Utility

AutoLayout Utility

- Resolving elements aligning problem

Original

Unexpected

Expected

AutoLayout Utility

```
[view ADKHideViewWidth];
```

```
[view ADKHideTrailingConstraint];
```

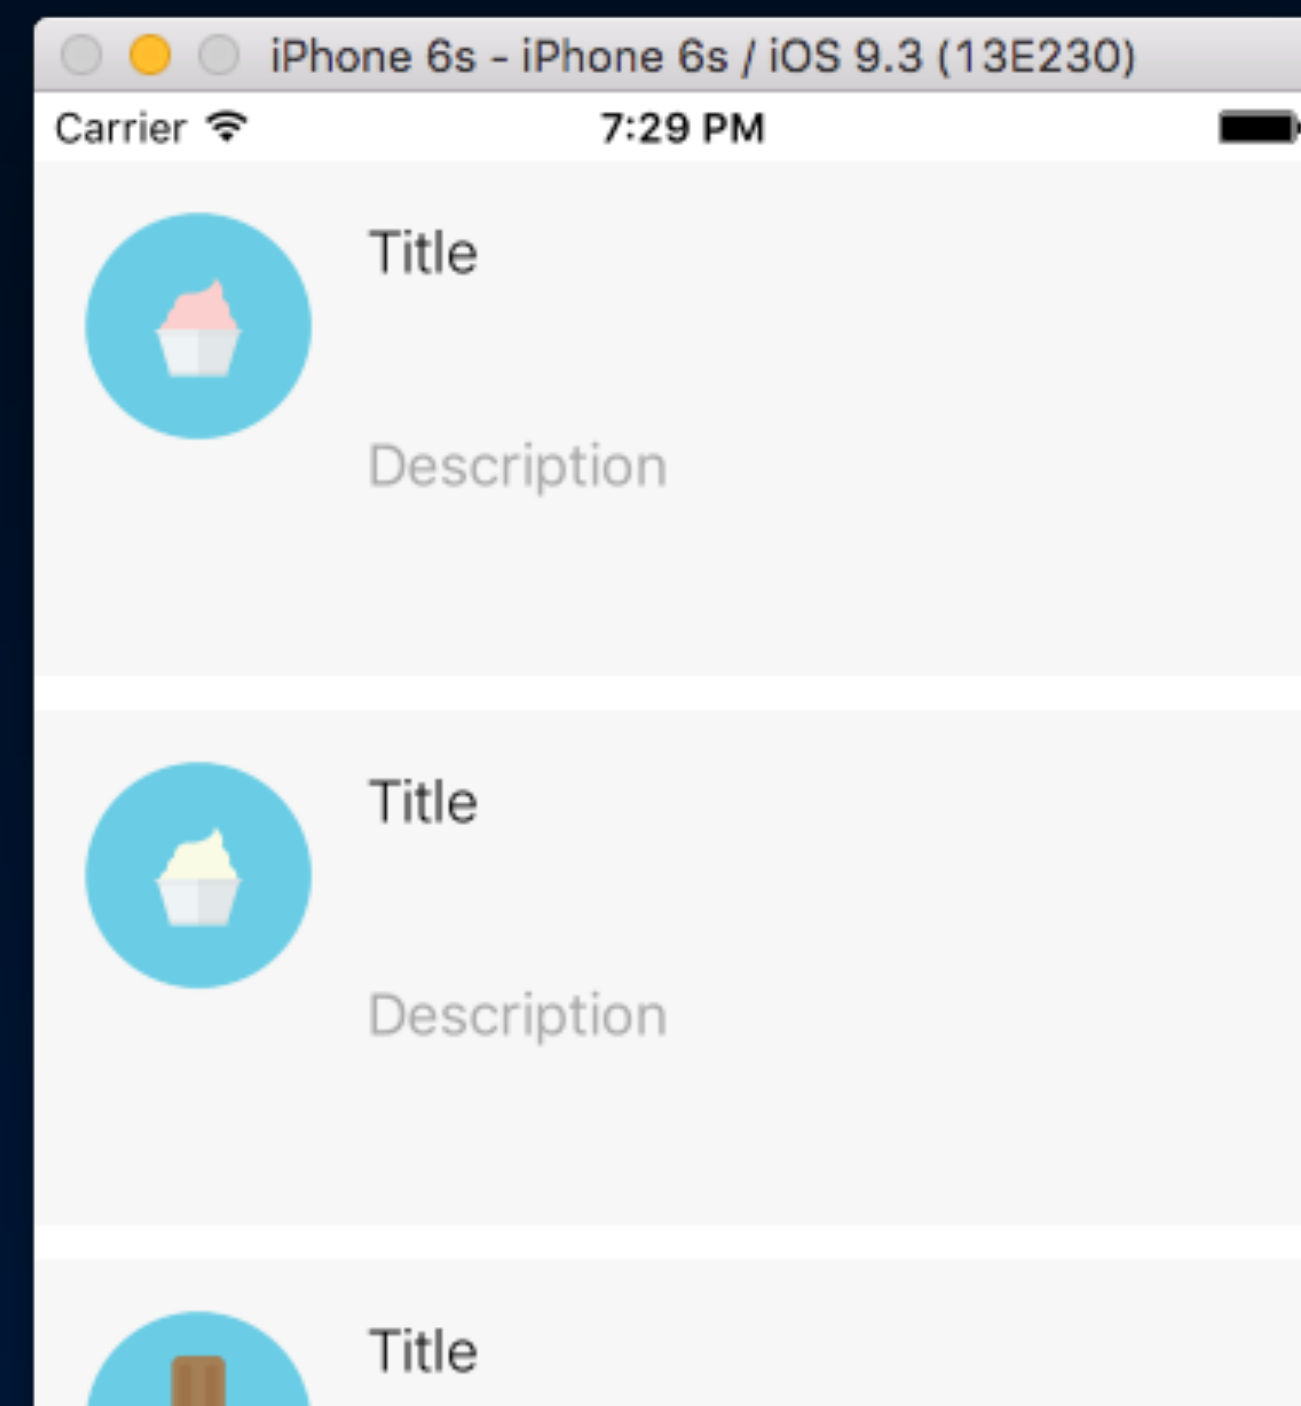

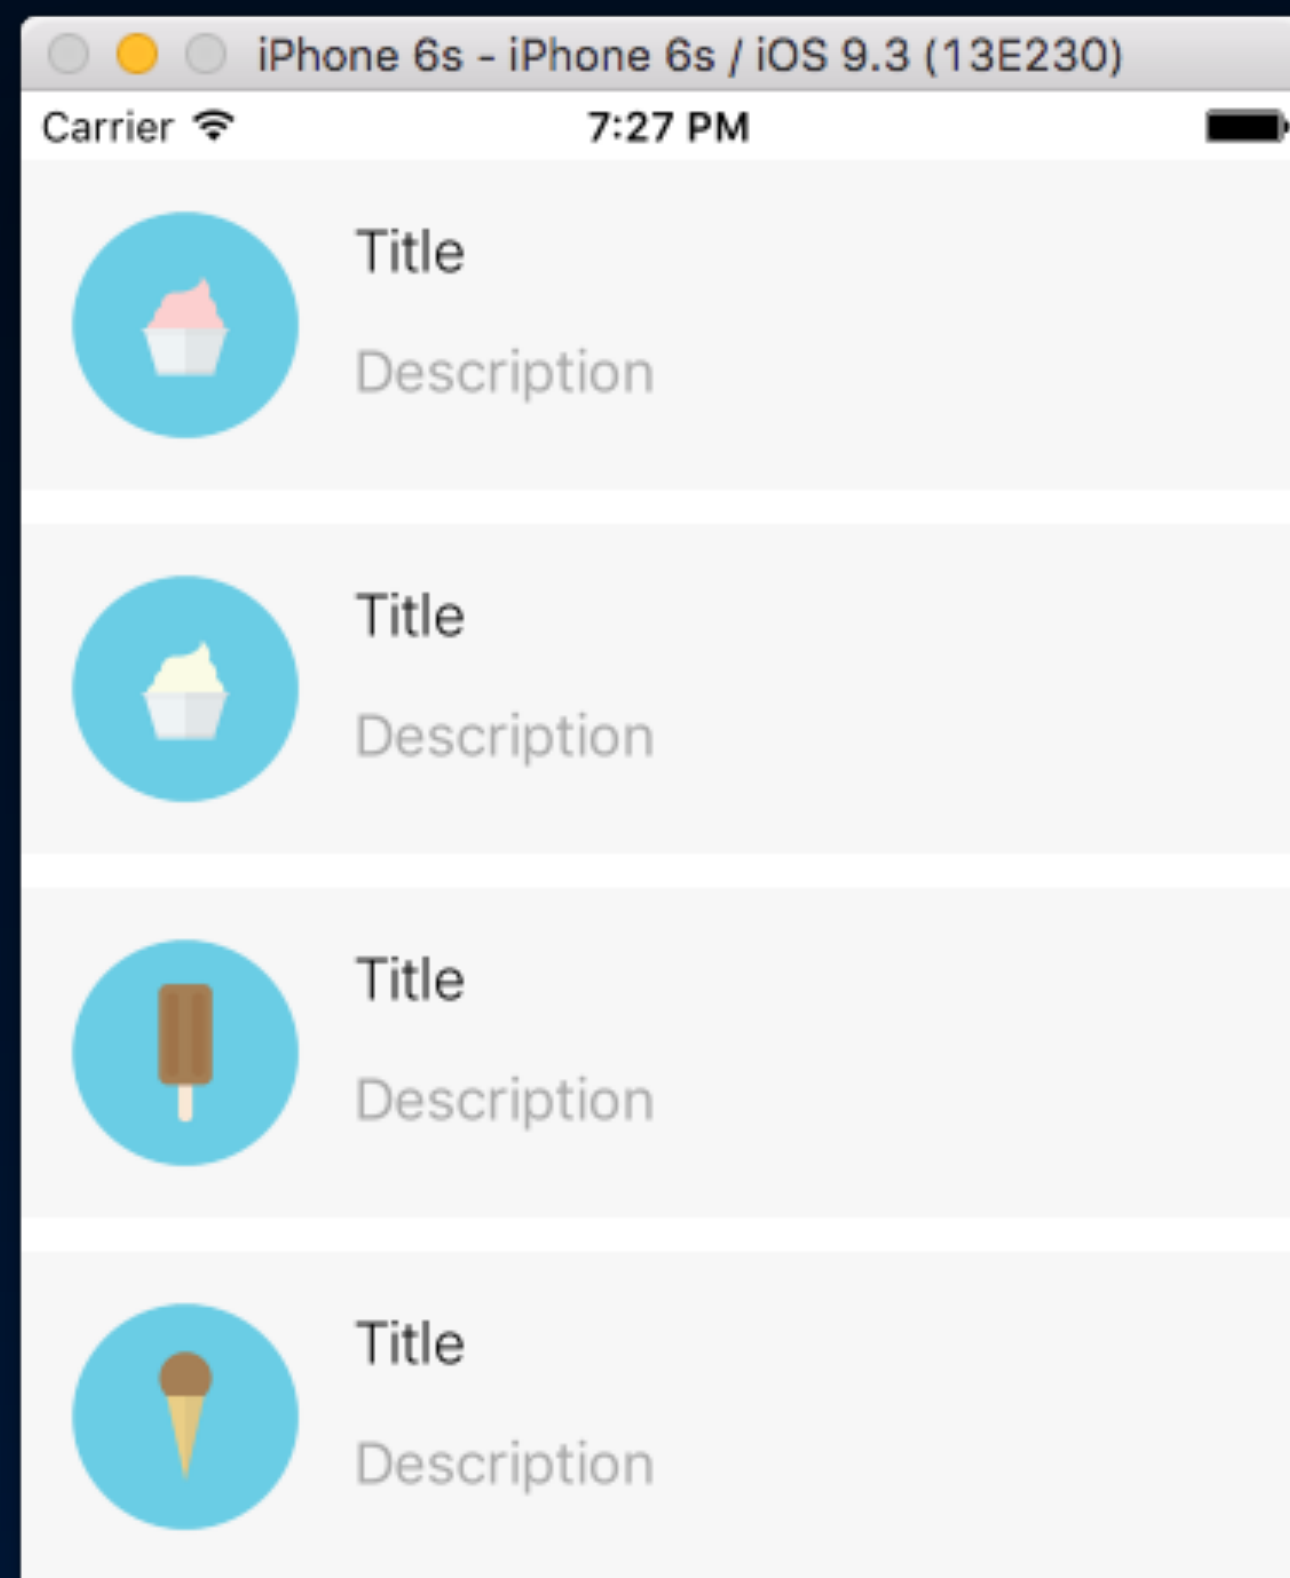

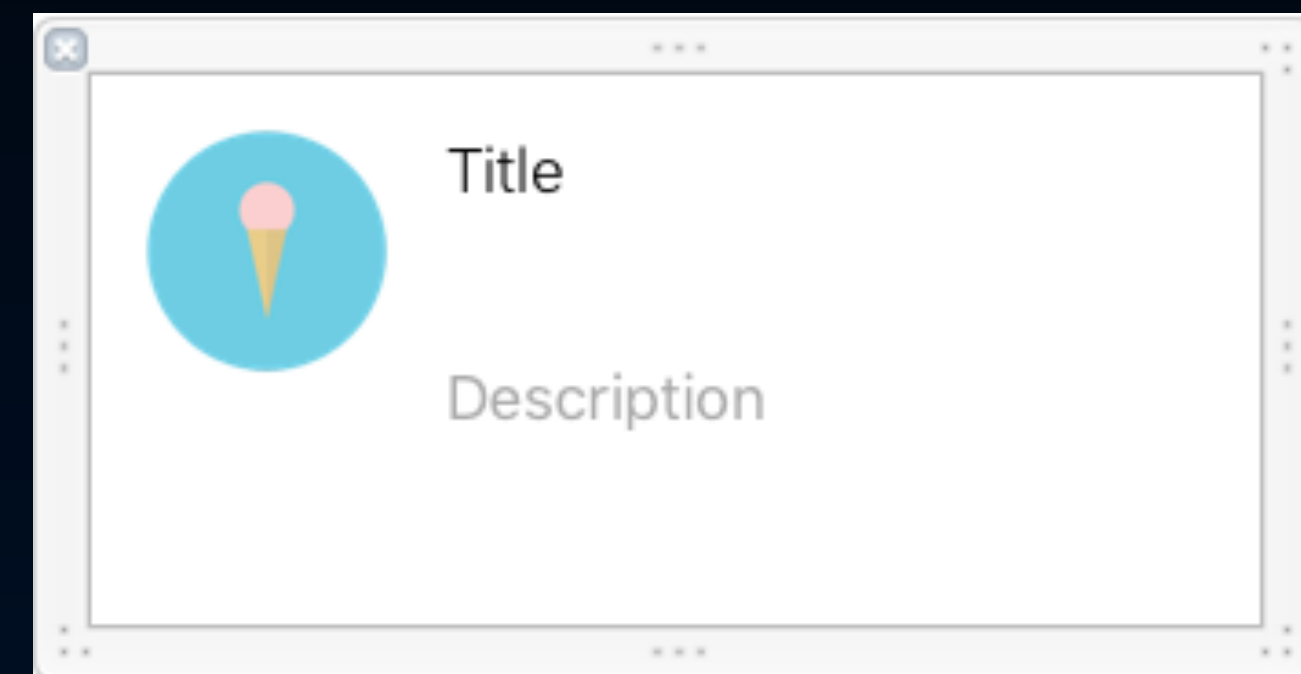

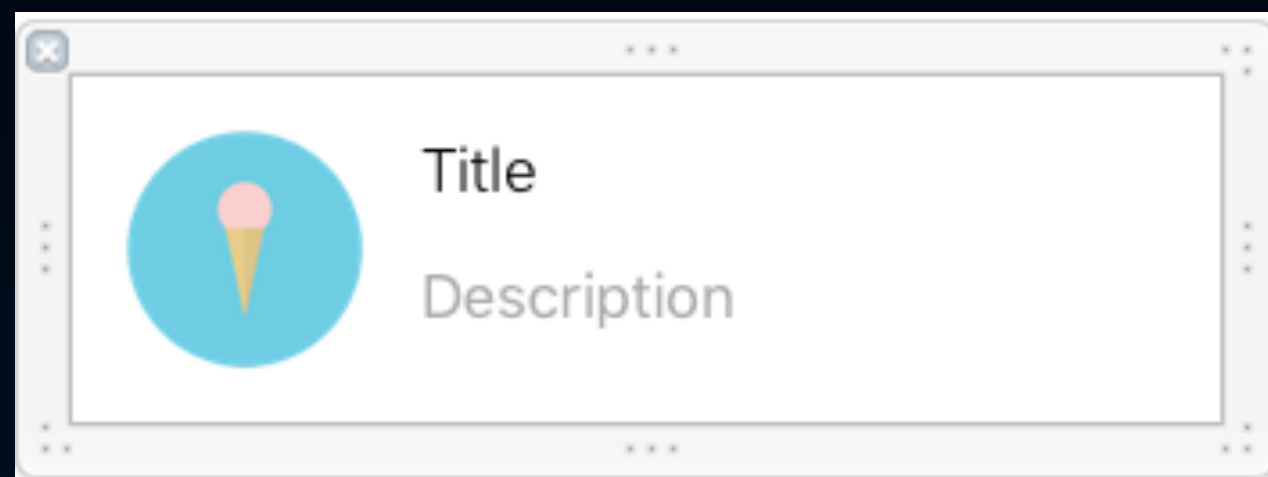

Demo

Using UIView+AutoLayoutSupport

Using ADKNibSizeCalculator

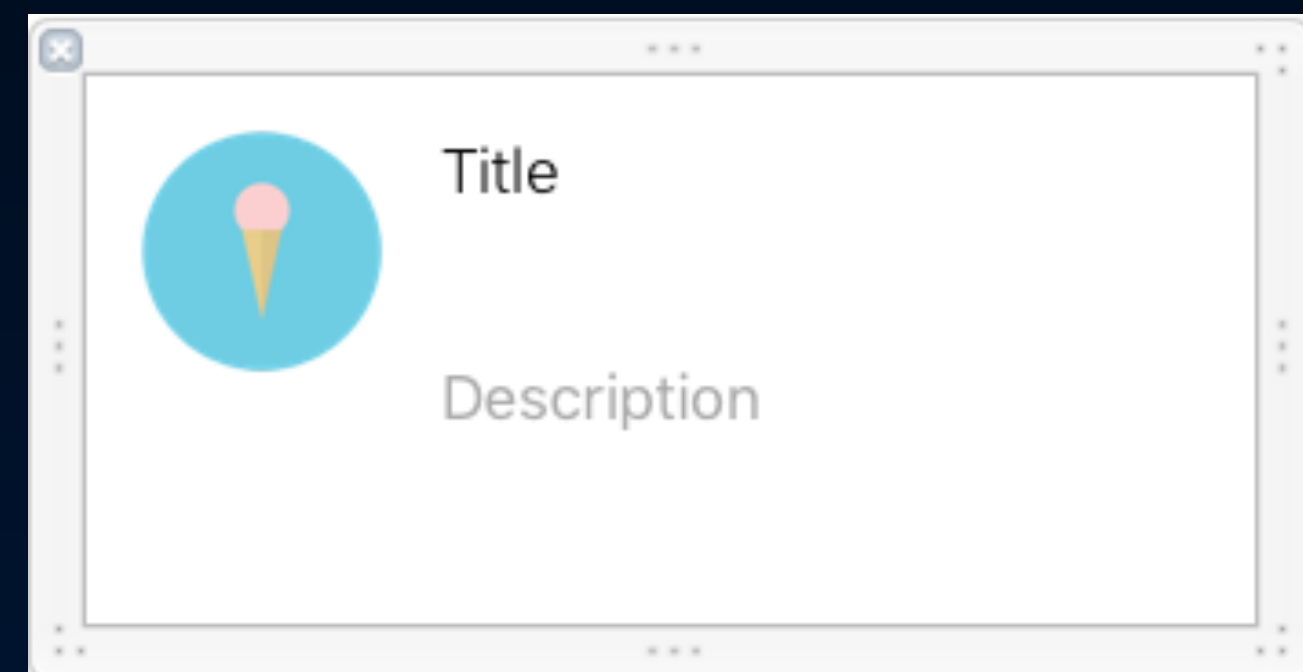

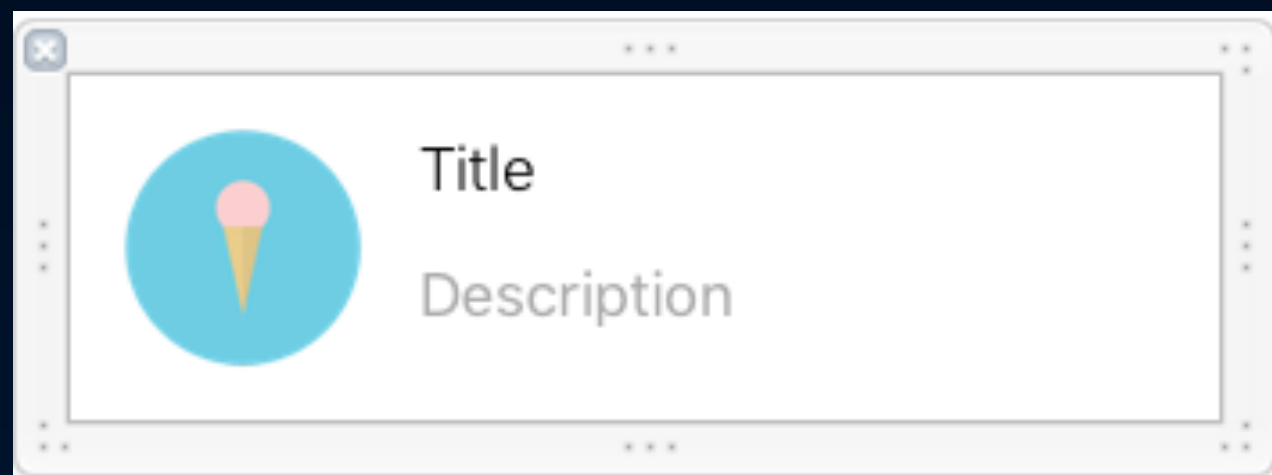

Nice tool for Communication

ADKNibSizeCalculator

ADKNibSizeCalculator

Modify nib file without changing any code

Using ADKNibSizeCalculator

Use ADKNibSizeCalculator to calculate size

```
CGSize size = [[ADKNibSizeCalculator sharedInstance]  
sizeForNibNamed:@"NibName" withStyle:ADKNibFixedHeightScaling];
```

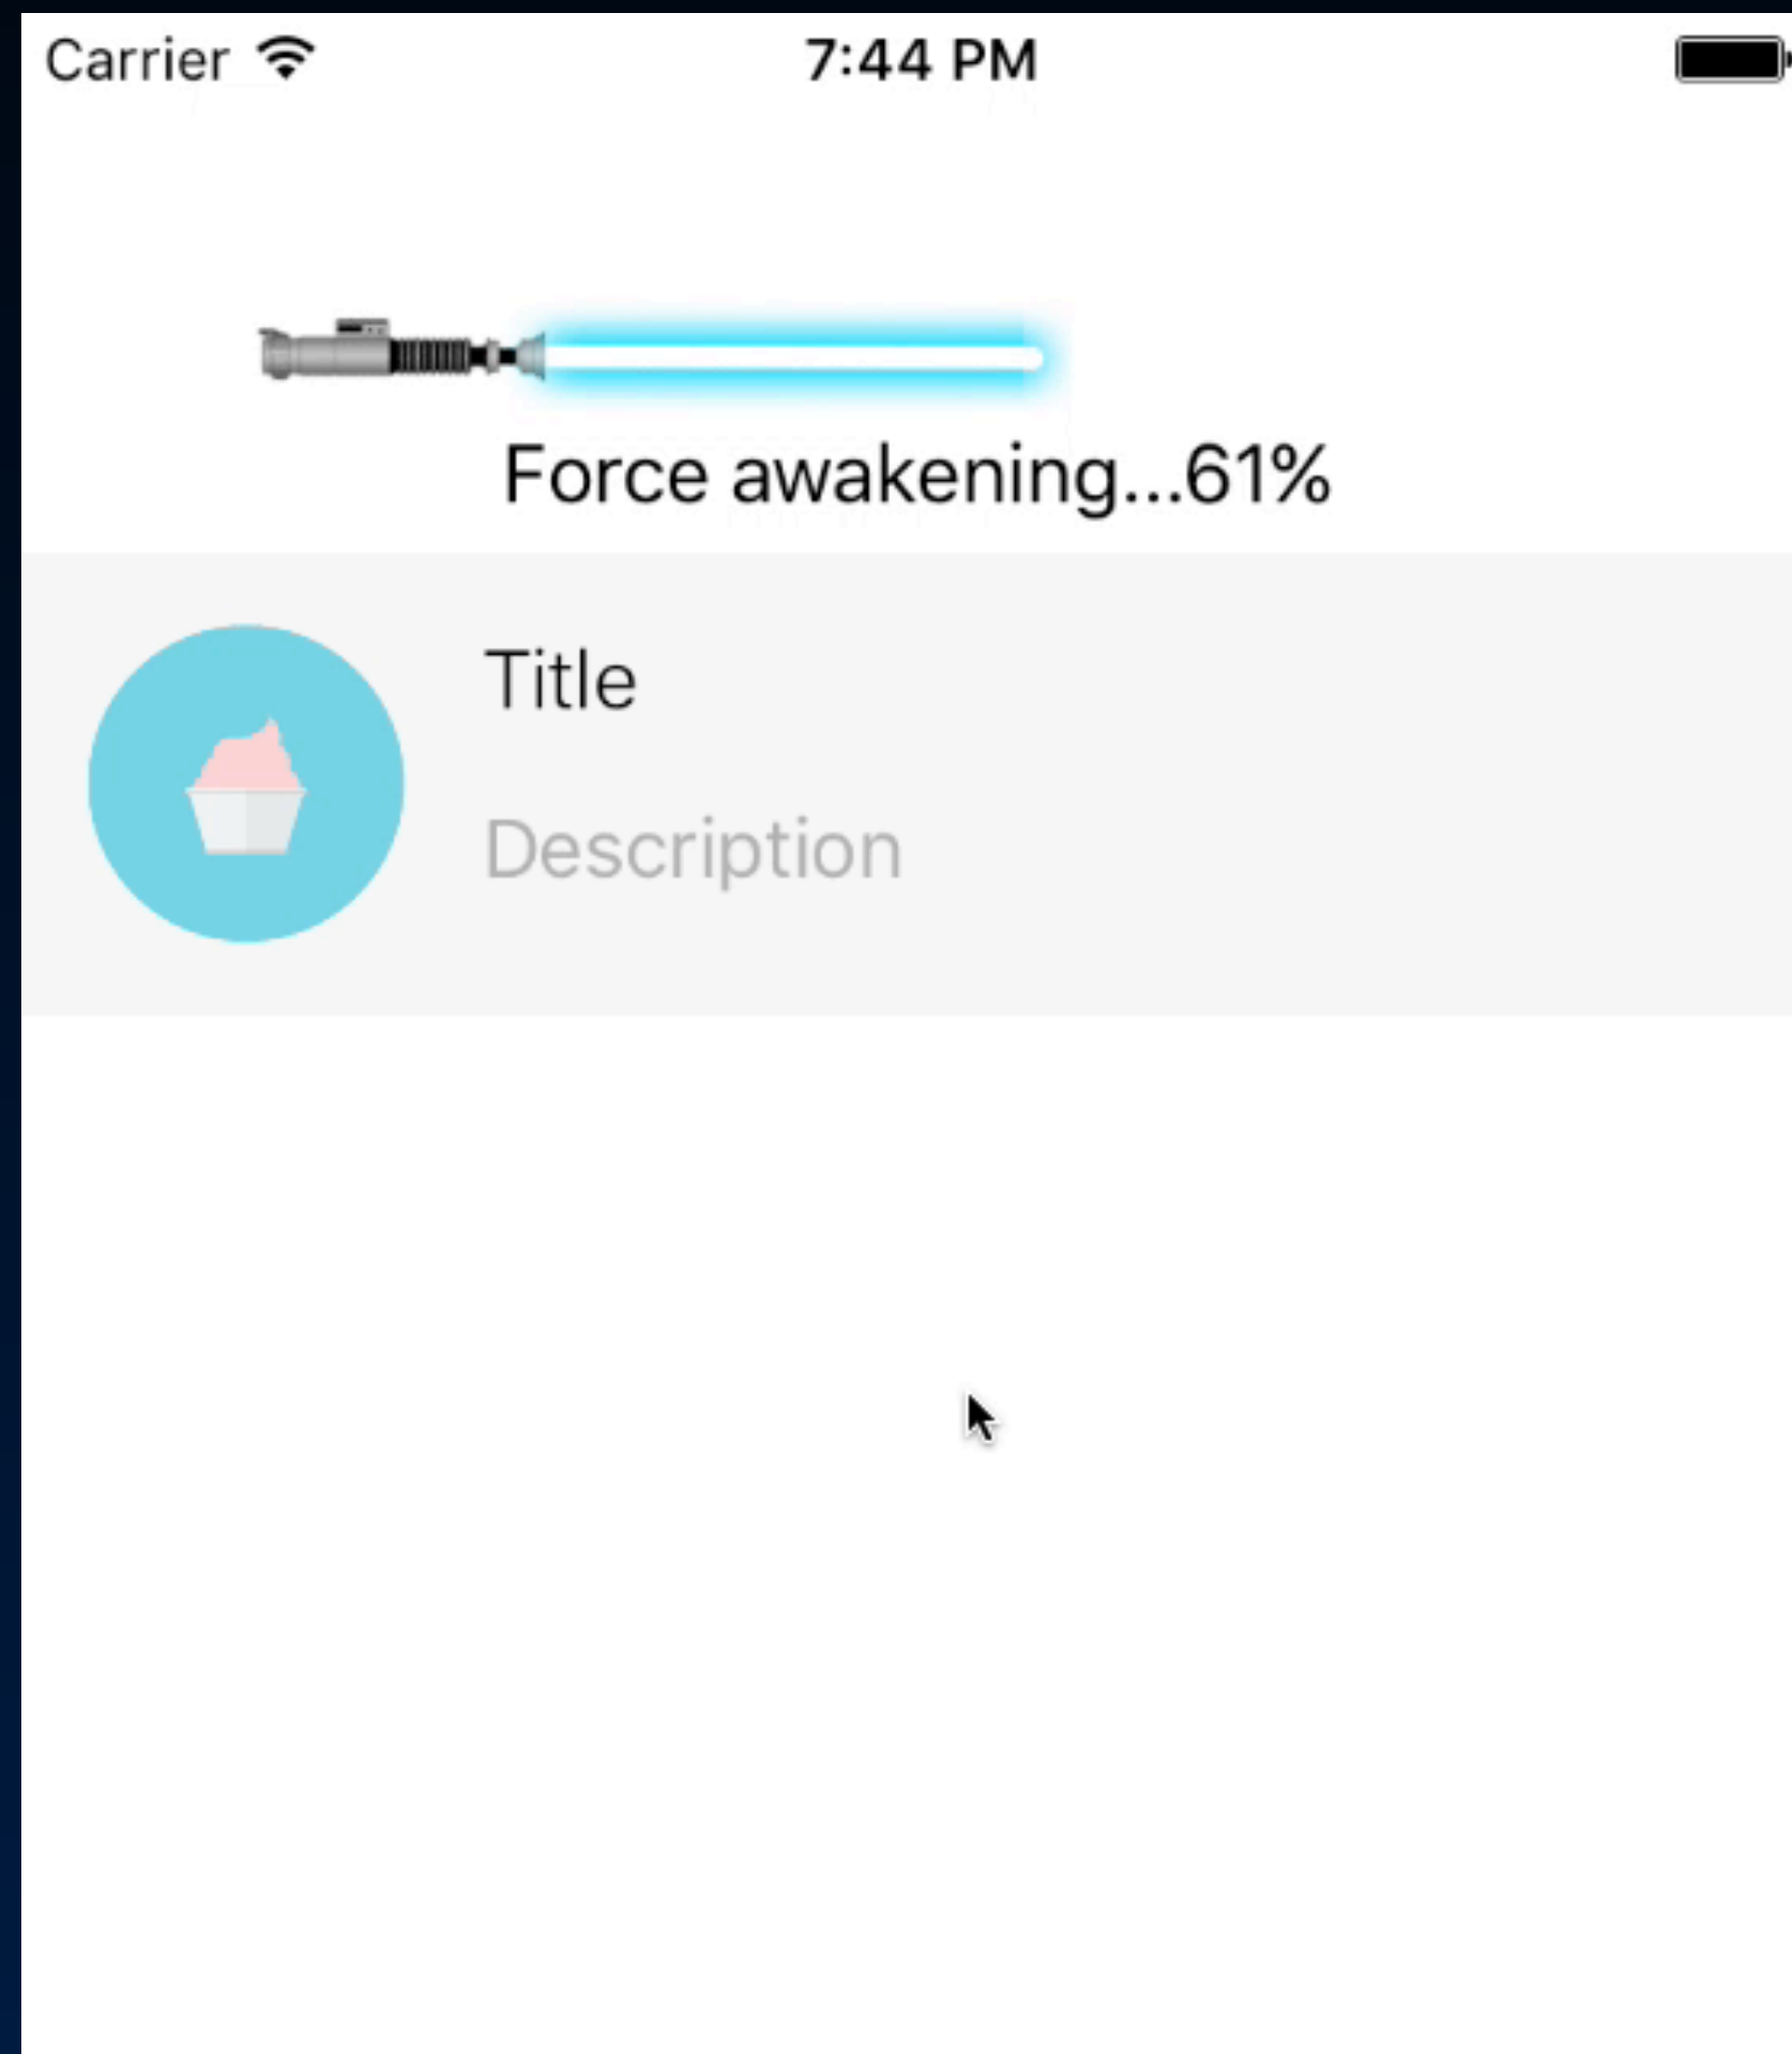

Demo

Calculating Nib Size with AppDevKit

Pull To Refresh in List View

Solution for Pull To Refresh

UIScrollView+ADKPullToRefreshView

Implement a PullToRefresh View

Create a view which implemented protocol ADKPullToRefreshViewProtocol

```
#import <AppDevKit/UIScrollView+ADKPullToRefreshView.h>
```

```
@interface PullToRefreshView : UIView <ADKPullToRefreshViewProtocol>
```

Implement required method for this protocol

- (void) ADKPullToRefreshStopped:(UIScrollView *)scrollView
- (void) ADKPullToRefreshTriggered:(UIScrollView *)scrollView
- (void) ADKPullToRefreshLoading:(UIScrollView *)scrollView

And more optional method for this protocol

- (CGFloat) ADKPullToRefreshTriggerDistanceTimes:(UIScrollView *)scrollView
- (void) ADKPullToRefreshDragging:(UIScrollView *)scrollView
- (void) ADKPullToRefreshView:(UIScrollView *)scrollView
draggingWithProgress:(CGFloat)progress

Add PullToRefresh View on Scroll View

Add PullToRefresh View on Scroll View

```
[scrollView ADKAddPullToRefreshWithHandleView:refreshView  
actionHandler:^(  
    // do something here  
)];
```

Don't forget to stop animation after things done

```
[scrollView.pullToRefreshContentView stopAnimating];
```

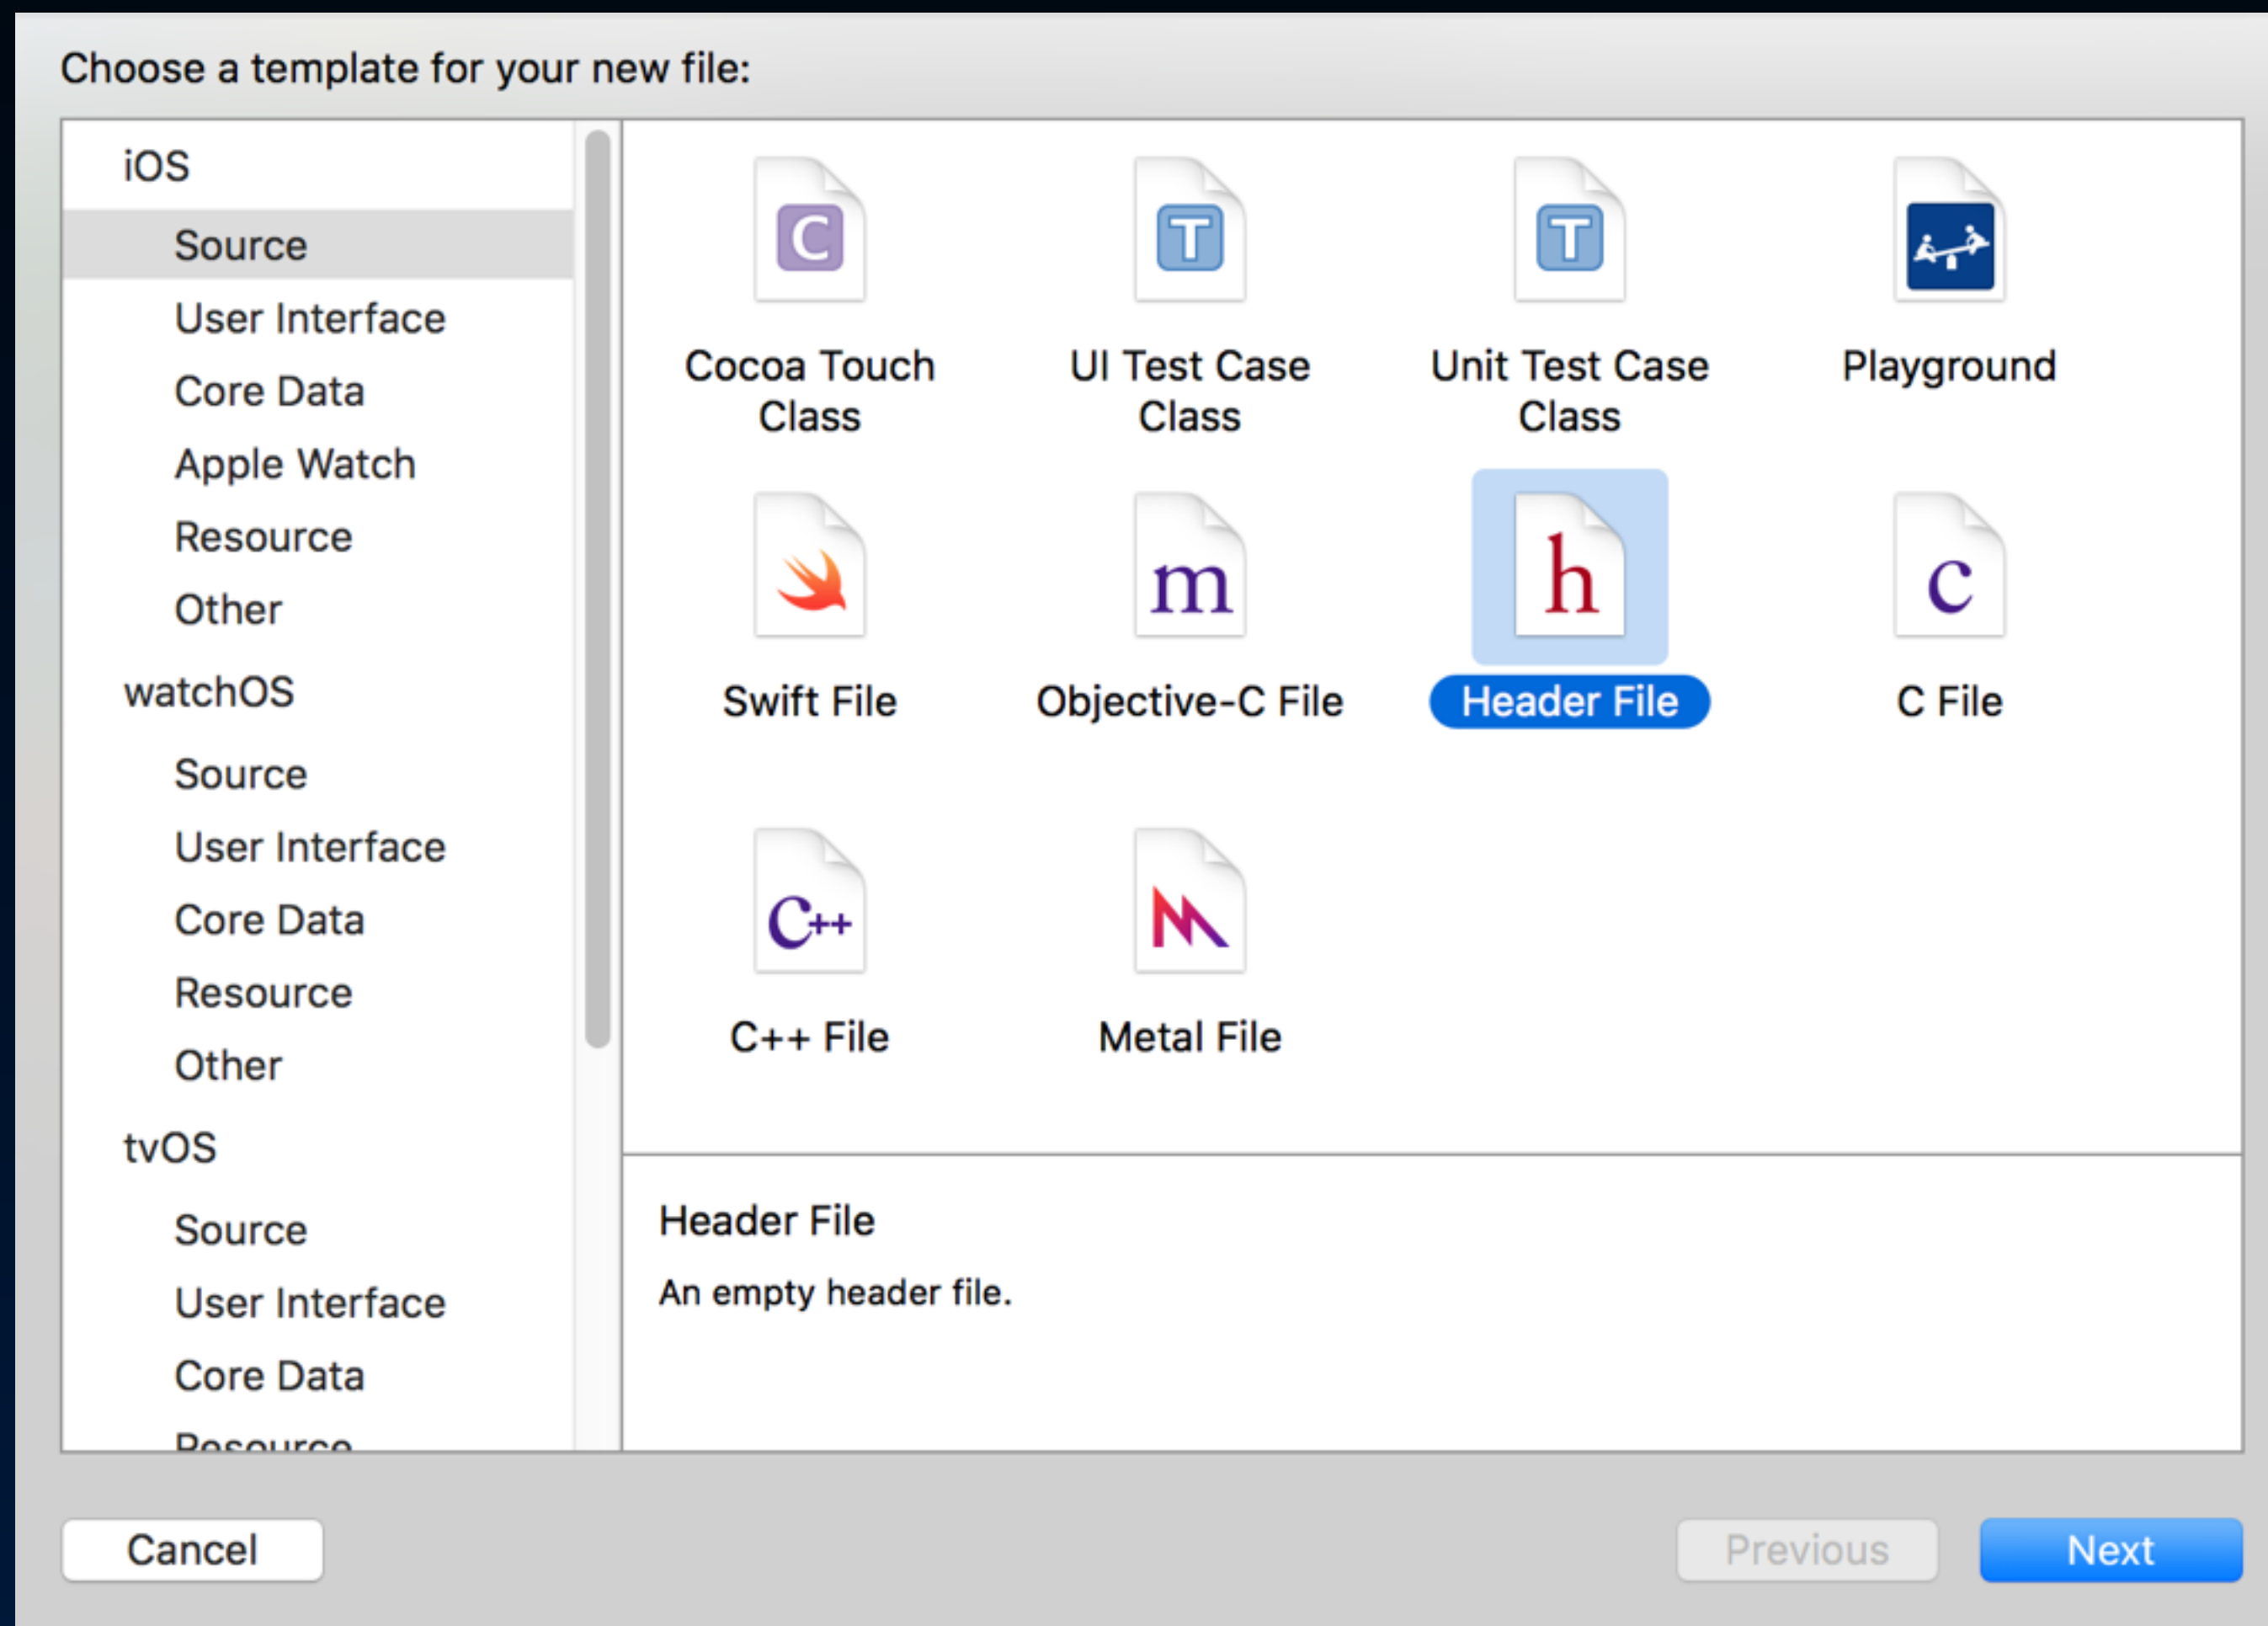

Demo

Implement Pull To Refresh with AppDevKit

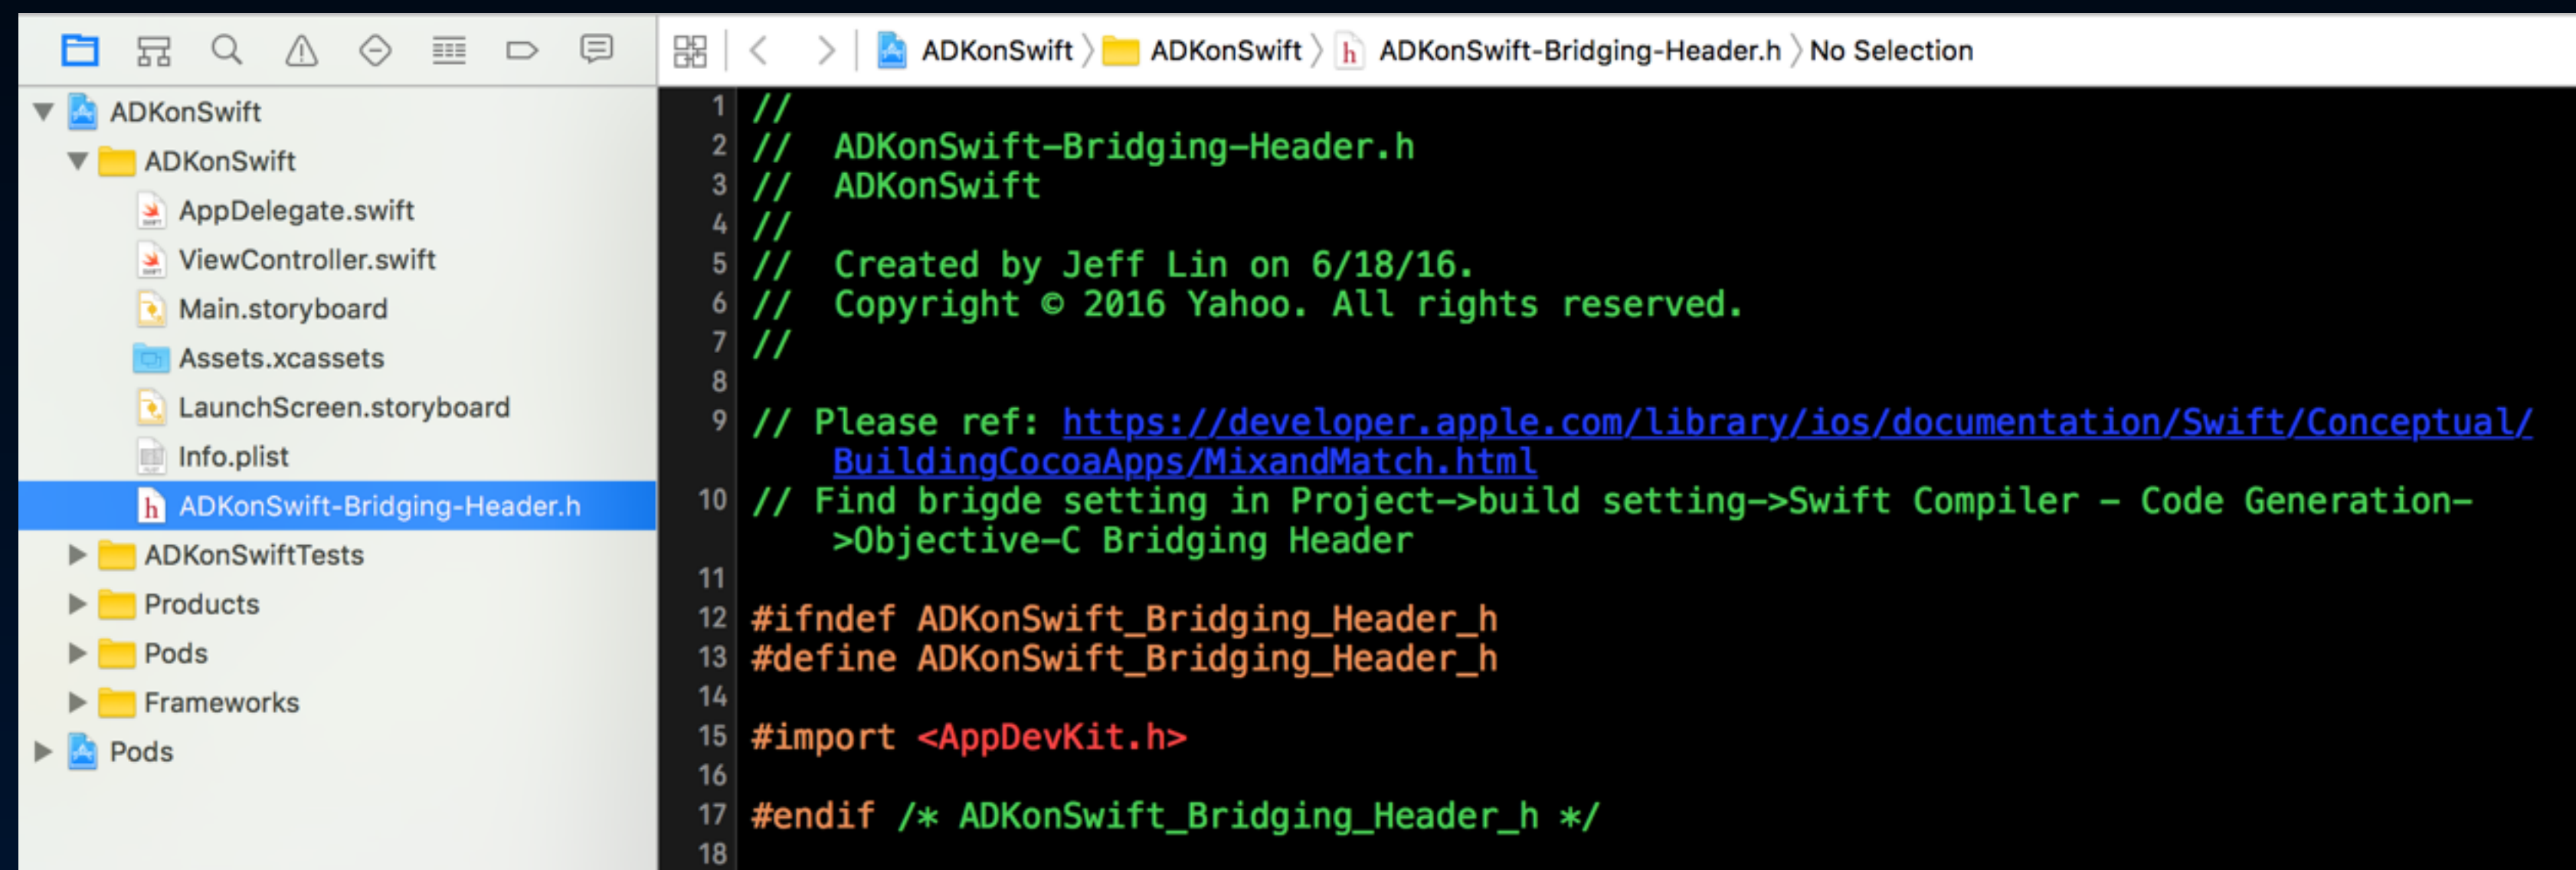

Using AppDevKit in Swift project

AppDevKit Works Well with Swift

Add Bridge Header

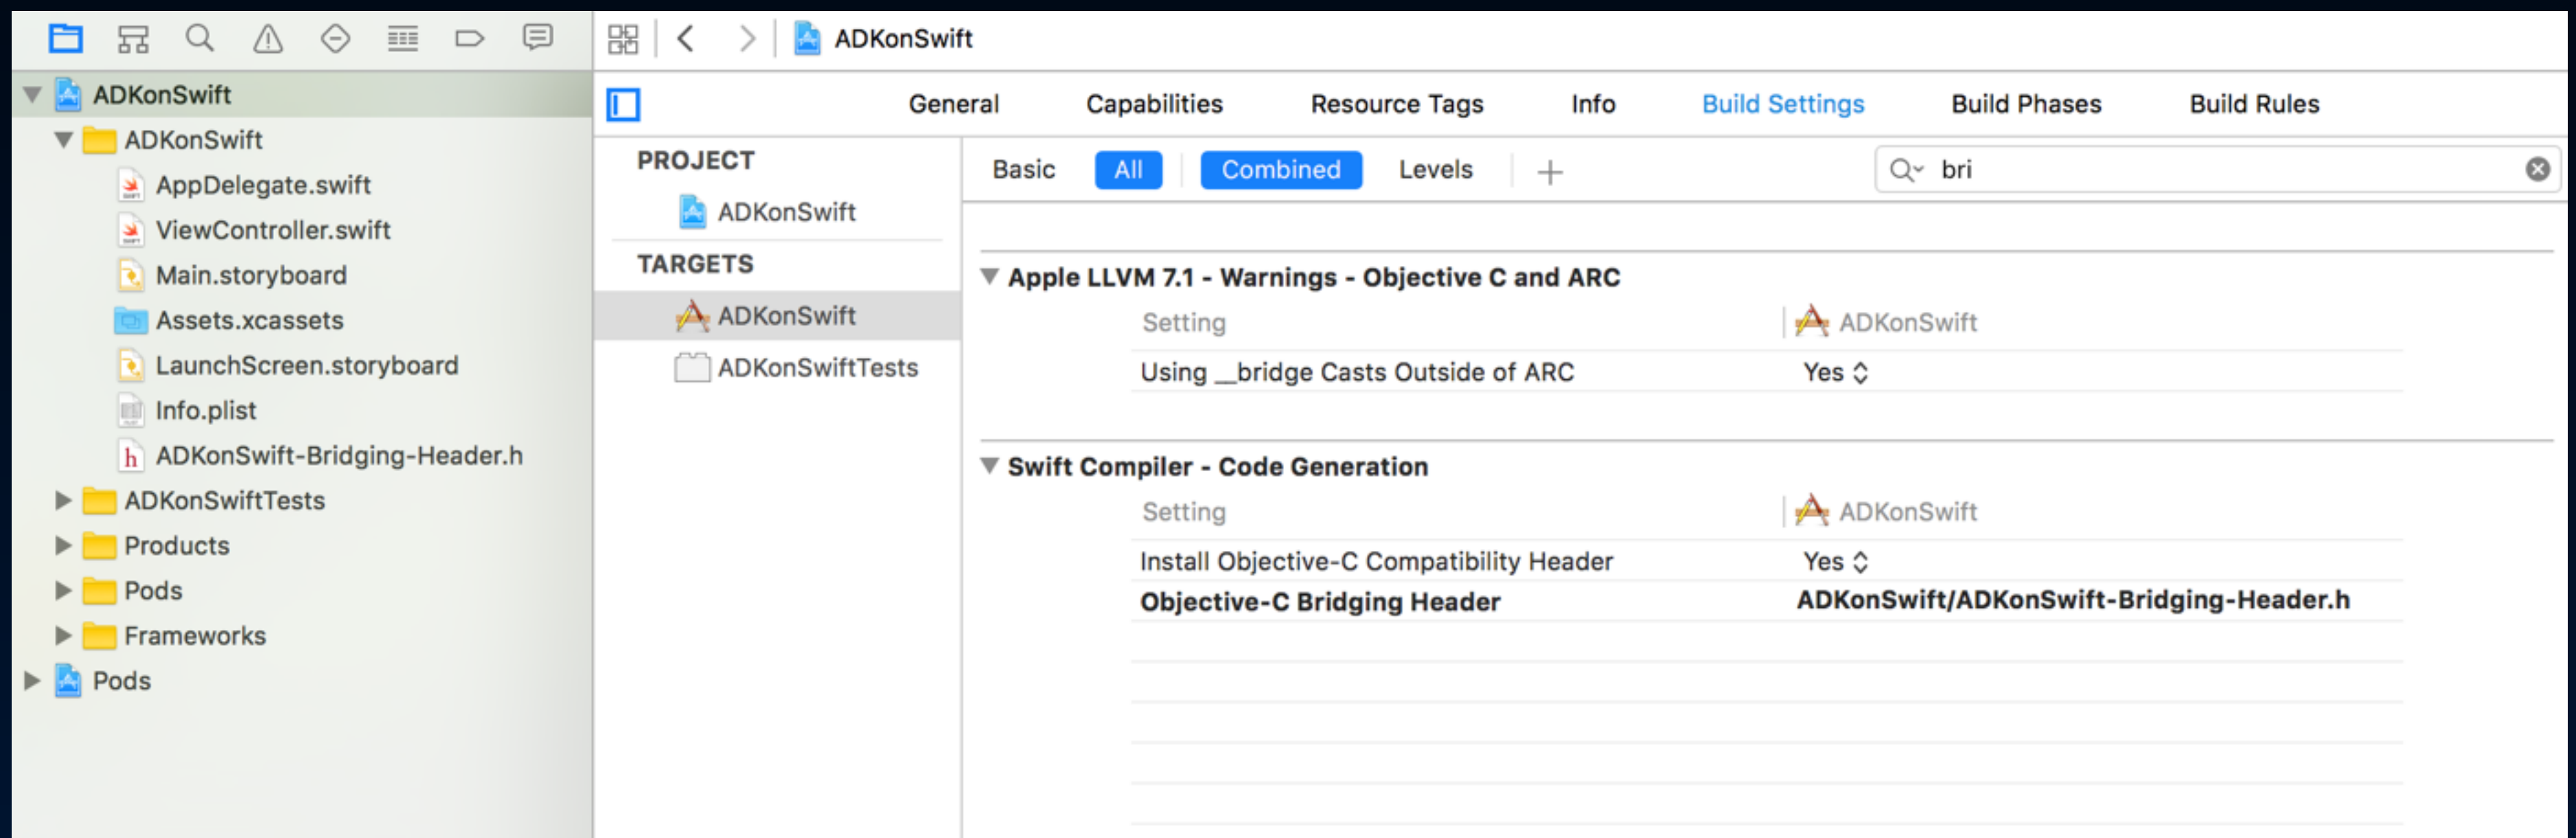

Add Bridge Header

`#import <AppDevKit.h>`

Bridge Header Settings

Using Swift with AppDevKit

```
import UIKit

class ViewController: UIViewController {

    override func viewDidLoad() {
        super.viewDidLoad()
        self.setupView()
    }

    override func didReceiveMemoryWarning() {
        super.didReceiveMemoryWarning()
        // Dispose of any resources that can be recreated.
    }

    func setupView() -> Void {
        self.view.backgroundColor = UIColor.ADKColorWithHexString("0x1DB2E8")
    }
}
```

```
self.view.backgroundColor =
UIColor.ADKColorWithHexString("0x1DB2E8")
```

Q + A
